

FOR IMMEDIATE RELEASE

KANGURU SOLUTIONS RELEASES NEWLY DESIGNED USB DUPLICATORS

Millis, Massachusetts – May 18th, 2011 - Kanguru Solutions today announced the release of a new, redesigned line of hardware based USB Duplicators intended to streamline the loading of data onto multiple USB devices.

Redesigned from the ground up, the new Kanguru USB Duplicators are faster and more feature rich than their predecessors. These extremely reliable units also feature a built-in 500GB hard drive for storing duplication jobs (images) for quick and easy access. They are great for sales and marketing preparation, IT work, data backups and more.

Kanguru USB Duplicators come equipped with a multi-function Liquid Crystal Display (LCD) that makes them easy to use. The LCD menu features duplication options including “Full”, “Brief”, “Resize” and “Smart” for a variety of copying modes. They are compatible with all USB standards, including USB 3.0 (at USB2.0 speeds). Kanguru USB Duplicators work with USB memory sticks as well as USB hard drives and support all major file systems, including Windows, DOS, Linux, and Mac file system types.

“We’re very pleased with the release of this new product.” said Donald Brown, President, CEO of Kanguru Solutions. “The proliferation of USB storage devices makes this an incredibly useful tool for IT and marketing departments. There has never been an easier, faster, or more efficient way to duplicate data from one USB device to as many as necessary.”

Kanguru USB Duplicators are available in 11, 21 and 43 Target models.

About Kanguru
