To Whom It May Concern:

The Kanguru 16x BD-RE USB2.0 Blu-ray Burner (model U2-BRRW-16x) has onboard memory built-in for storing the system firmware and ensuring stable burning. Each system contains RAM and Flash memory.

The flash memory is non-volatile and stores the drive's firmware. The flash memory is not accessible to the user and is protected by FPGA security technology.

This RAM is buffer memory and acts as a cache. When the drive is burning data to a disc, data is read from the source and temporarily stored in the cache before it is written to the target disc. The cache is composed of volatile RAM memory and all data stored in the buffer is erased when the drive is powered down.
